

The wanted role sits further from Master the more agency a person grants a place, and that link is stronger for wanting than for seeing

Standardised paths. Line width grows with the size of the path; * = the path differs between the two panels (Wald p < .05). Latent variables show their indicator counts.

The role people SEE (R² = 0.15)

The role people WANT (R² = 0.25)

→ raises → lowers → not significant

WLSMV, n = 2,489; country dummies are in the model, not drawn. The two outcomes keep a residual correlation of 0.30. Source: 26_ordered_sem.R

Position runs from Master (1) to Object (6): positive = a role further from Master.
