

## What the transition table looks like as a model

Every role is preferred over Master; the middle roles are the ones people most readily leave

Quasi-symmetry fits ( $G^2 = 22.0$ ,  $df = 10$ ) where symmetry does not ( $G^2 = 192.4$ ,  $df = 15$ ). Hollow point marks the reference. Source: 11\_square\_table\_models.R
