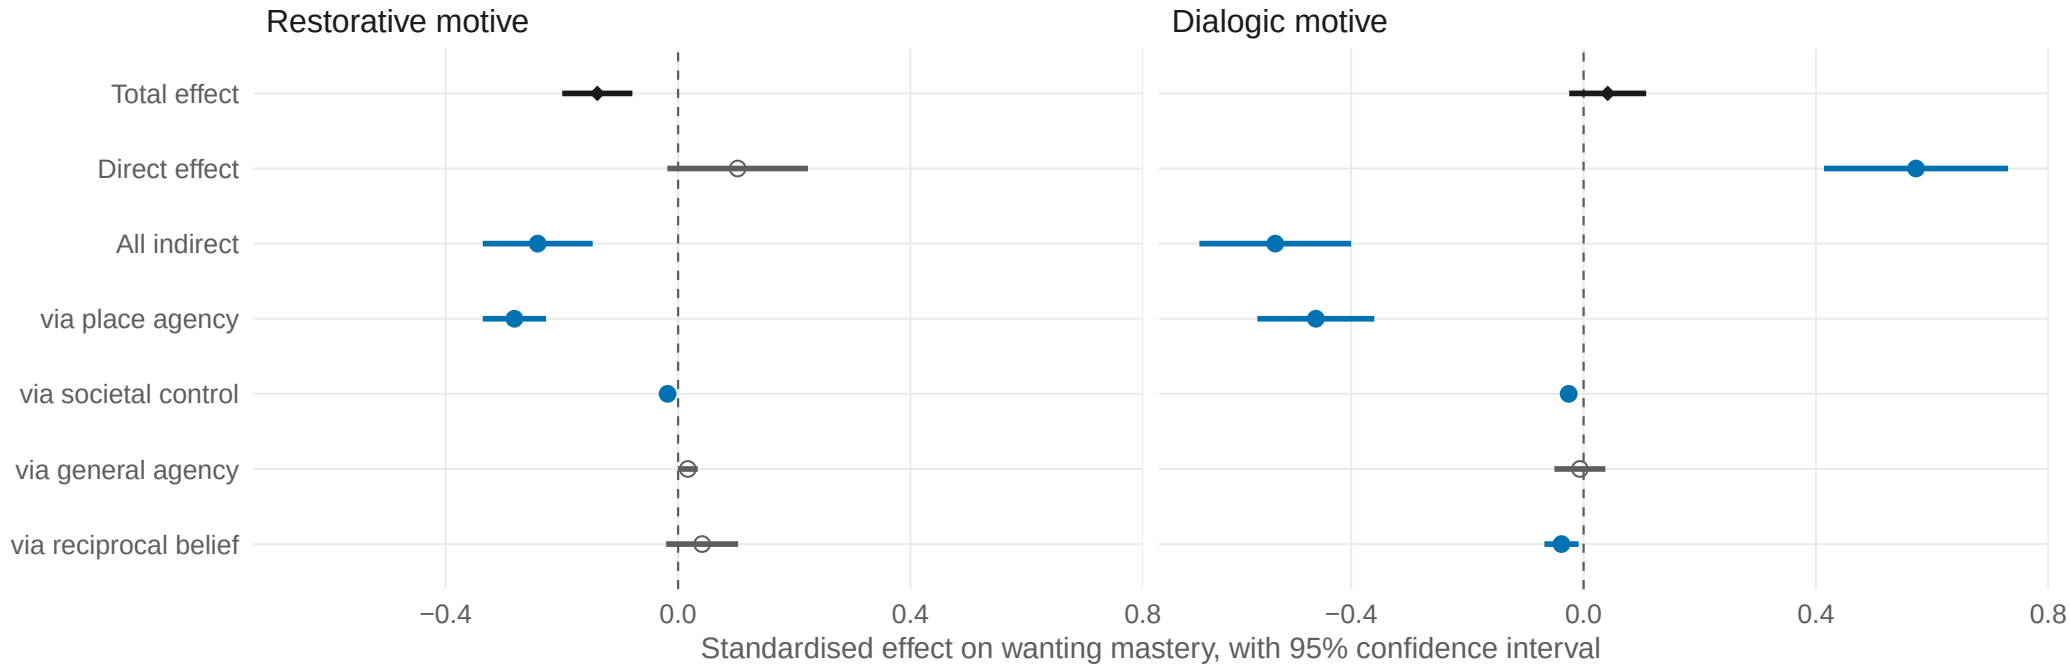
Place agency carries almost all of the indirect effect of the motives

Restorative acts almost entirely through place agency; the dialogic motive raises the wish directly and lowers it through place agency, netting to about zero. C



One motive per model (together they suppress one another). The serviced motive is omitted: its model is unstable (largest standardised path 1.62).
Cross−sectional data: these are decompositions consistent with mediation, not evidence of causal order. Delta−method intervals. Source: 21_mediation_sem.R
