

What each motive does to the role people want

Restorative pulls away from both poles; the dialogic motive raises both of them

Multinomial logit, $n = 2,489$, adjusted for country, age and gender. Coloured intervals exclude 1.

Adding the motives improves on country, age and gender alone: LR chi-squared(15) = 137.0. Source: 14_motives_and_roles.R
